

SZUTEST

CONSTRUCTION PRODUCTS

Quality focus in every unit of the construction!

We can define Construction Products as “any material used in all types of civil engineering works, incorporated in a permanent manner in construction works and the performance of which has an effect on the performance of the construction works with respect to basic requirements. These products are assessed and certified according to the adopted and harmonized standards by the European Union member states.

As SZUTEST, we are giving services of product certification for CE marking, which is a legal obligation enforced by Regulation (EU) No 305/2011, and with processes on voluntary basis. We are happy and proud of having worked with the biggest companies in our county for long years.

Metallic Products

Structural Aluminum Profiles, Steel Pipes and Profiles, Steel Constructions, Hot-Rolled Constructional Steels, Structural Bolting Components

Road Construction Products

Aggregates, Asphalt and Components, Bitumen and Bitumen Types

Construction Chemicals

Plasters, Concrete Additives, Construction Adhesives, Sealing Products

Thermal Insulation Boards

Waterproofing Membranes

Windows and Profiles

Structural Wood Products

Chimneys and Flues

Fixed Fire Fighting and Detection Equipment
